

# GOKUL S

## SOFTWARE DEVELOPER

50, Erode, Tamil Nadu | 📞 9629788892 | ✉ gokul.slj@gmail.com | 🌐 GokulSaravanan

### PROFILE SUMMARY

Software Developer with 2 years of experience in service-based and product-based startups. Experienced in building responsive frontend applications using React.js and integrating REST APIs with Spring Boot backends. Strong understanding of product workflows, real-time data handling, and scalable web applications. Seeking to contribute to a stable, growth-oriented engineering team.

### TECHNICAL SKILLS

- |              |               |               |       |
|--------------|---------------|---------------|-------|
| • JavaScript | • Redux       | • Java        | • SQL |
| • React JS   | • React Query | • Spring Boot | • Git |

### PROFESSIONAL EXPERIENCE

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                            |

| <ul style="list-style-type: none"><li>Designed and developed scalable React.js components for real-time dashboards and administrative panels, supporting dynamic data rendering and modular architecture.</li><li>Integrated RESTful APIs from Spring Boot backend using Axios and React Query, improving data fetching efficiency and reducing redundant API calls through caching strategies.</li><li>Optimized UI performance using memoization, lazy loading, and efficient state management, enhancing cross-device responsiveness and reducing load time.</li></ul> |                            |
| <b>Java Full Stack Developer, J3Soft Solutions Pvt Ltd, Hosur</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>Mar 2024 - Jan 2025</b> |
| <ul style="list-style-type: none"><li>Built and integrated RESTful APIs using Spring Boot and connected them with React.js frontend components to enable real-time data operations.</li><li>Implemented secure and optimized CRUD modules with proper validation and database interactions using SQL.</li></ul>                                                                                                                                                                                                                                                           |                            |

### PROJECTS

- i-AWS (Automatic Weighing System)**  
Technologies: JavaScript, PHP (Backend), SQL.
  - Led the frontend development of an automated weighing system, building responsive dashboards to display real-time vehicle weight data before and after product delivery.
  - Integrated backend APIs and developed live reporting modules with historical data views, enabling accurate tracking and operational monitoring.
- iChlorine – Real-Time Chlorine Monitoring Platform**  
Technologies: React.js, React Query, Google Maps, Spring Boot, PostgreSQL
  - Built a scalable SPA using React and Vite for real-time chlorine level monitoring and reporting.
  - Integrated RESTful APIs and implemented efficient server-state management using React Query.
  - Developed interactive maps with Google Maps and Leaflet to visualize site locations, reservoirs, and device tracking.
